PROFESSIONAL SUMMARY

Software Engineer with 5+ years of experience owning Java backend services in production and building the test automation, CI pipelines, and code-quality practices that keep them reliable — from a 20+ microservice fraud-investigation platform (Orion) at a Fortune 500 financial company to five Java microservices I currently maintain inside a 1,000+ service network-automation ecosystem. I build APIs, write and automate the tests that catch regressions (JUnit, TestNG, Selenium, RestAssured/OkHttp), enforce code quality with SonarQube and peer review, debug and fix production issues, and mentor other engineers along the way. Comfortable across AWS/Azure infrastructure, CI/CD (Jenkins), relational and NoSQL data stores, and Agile delivery in financial-services environments.

SKILLS

Languages & Core CS: Java (Core Java, OOP, POJOs, Design Patterns), Data Structures & Algorithms, JavaScript (ES6+), TypeScript, KQL, HTML, CSS

Backend & APIs: Spring Boot, Spring MVC, Spring Security, REST APIs, Microservices Architecture, Hibernate, JPA

Frontend: Angular 9/10/12, Angular Material, RxJS, React, Node.js, Bootstrap

Testing & Quality Engineering: JUnit, TestNG, Mockito, Selenium WebDriver, Postman, RestAssured, OkHttp, TDD, SonarQube, Secure Coding Practices, Code Reviews

AI-Assisted Dev: GitHub Copilot, LLM API Integration (OpenAI, Claude, Azure OpenAI), Prompt Engineering

DevOps & CI/CD: Jenkins, GitHub Actions, Azure DevOps, Git, Docker, Kubernetes (EKS, AKS), Helm

Cloud Platforms: AWS (EC2, S3, IAM, VPC, Lambda, RDS, CloudWatch, EKS), Azure (Azure Monitor, AKS, Azure DevOps), Pivotal Cloud Foundry (PCF)

IaC & Observability: Terraform, AWS CloudFormation, ARM Templates, Prometheus, Grafana, ELK Stack

Databases: PostgreSQL, MongoDB, Oracle, SQL Server

Practices: Agile (Scrum/Kanban), Incident Response & RCA, Low-Latency & High-Availability System Design

WORK EXPERIENCE

Full Stack Engineer January 2025 – Present

CloudSky Software LLC (Contract) United States

- Own and maintain 5 of 1,000+ Java microservices on the Network Dev team — including a wiring validator, an orchestrator, and core middleware — that power a downstream application I sync with weekly to align on contract changes and coordinate releases.
- Debug and fix production issues across these services, tracing failures through logs and CloudWatch/Grafana dashboards and shipping patches with minimal disruption to the consuming application.
- Automate deployment and infrastructure for my services with Terraform, Docker, Kubernetes (EKS), and Jenkins, cutting deployment time by ~60% while keeping availability above 99.9%.
- Write and maintain unit and integration tests (JUnit, TestNG) for the services I own, track code quality with SonarQube, and optimize queries/caching (PostgreSQL, Redis) to reduce average API latency by ~25%.
- Use GitHub Copilot and LLM APIs (OpenAI, Claude, Azure OpenAI) day-to-day to speed up debugging, code review, and documentation for the services I maintain.

Full Stack Engineer May 2024 – January 2025

Techsara Solutions United States

- Built and maintained features for a network-device validation application on the Networking team, running automated checks against device configurations to catch issues before they reached production networks.
- Debugged and fixed defects reported by network engineers, tracing issues from the UI/API layer down through device-check logic to root cause.
- Wrote tests covering new checks and bug fixes, and worked with the networking team to triage and prioritize incoming issues.

Full Stack Developer January 2020 – October 2022

Capgemini (Client: Discover Financial Services) Hyderabad, India

- Built and maintained Java backend REST APIs (Core Java, POJOs, design patterns) for Orion, a fraud-investigation platform with an Angular frontend used by call center agents to resolve customer fraud cases in real time, as part of a 20+ microservice architecture on the fraud management team.
- Debugged and fixed issues surfaced during the migration of legacy core Java systems to microservices, applying design patterns and efficient data structures to resolve defects and improve query performance across relational and NoSQL data stores.
- Wrote unit and API tests (JUnit, RestAssured) achieving ~85% coverage on core services, and worked with QA on integration, smoke, UI (Selenium), and regression testing before releases.
- Built and maintained CI/CD pipelines (Jenkins, Git, Docker, Kubernetes), deploying to Pivotal Cloud Foundry (PCF) for a platform handling 500,000+ API requests daily.
- Automated infrastructure as code (Terraform, CloudFormation), improving application availability to 99.9% and cutting environment provisioning time by 70%.
- Investigated and resolved production incidents through log analysis and root cause analysis, cutting recurring incidents by 30%; mentored junior developers and helped shape user stories during sprint planning.

EDUCATION

Master of Science in Computer Science 2022 – 2024 • Lee's Summit, MO

University of Central Missouri

CERTIFICATIONS

JEE Certified Full Stack Java Developer • Oracle Cloud Infrastructure Generative AI Certified Professional • AWS Certified Developer – Associate
