PROFESSIONAL SUMMARY

Software Engineer with 4+ years of experience building highly available, scalable, low-latency Java backend APIs and microservices for high-volume financial and fraud-management platforms, alongside cloud infrastructure automation on AWS and Azure. Hands-on with Spring Boot, REST APIs, Core Java design patterns, data structures & algorithms, relational and NoSQL databases, JUnit testing, and Agile/Scrum delivery. Contributed to a 20+ microservice architecture supporting a fraud-investigation tool used by call center agents, and to CI/CD and monitoring systems supporting applications processing 500K+ daily transactions at sub-200ms latency. Increasingly applies AI-assisted development (GitHub Copilot, LLM APIs) to speed up delivery. Strong foundation in secure coding practices, Git/Jenkins-based DevOps, and cross-team collaboration.

SKILLS

Languages & Core CS: Java (Core Java, OOP, POJOs, Design Patterns), Data Structures & Algorithms, JavaScript (ES6+), TypeScript, KQL, HTML, CSS

Backend & APIs: Spring Boot, Spring MVC, Spring Security, REST APIs, Microservices Architecture, Hibernate, JPA

Frontend: Angular 9/10/12, Angular Material, RxJS, React, Node.js, Bootstrap

Testing & Code Quality: JUnit, Mockito, Selenium, Postman, TDD, Secure Coding Practices, Code Reviews

AI-Assisted Development: GitHub Copilot, LLM API Integration (OpenAI, Claude, Azure OpenAI), Prompt Engineering

DevOps & CI/CD: Jenkins, GitHub Actions, Azure DevOps, Git, Docker, Kubernetes (EKS, AKS), Helm

Cloud Platforms: AWS (EC2, S3, IAM, VPC, Lambda, RDS, CloudWatch, EKS), Azure (Azure Monitor, AKS, Azure DevOps), Pivotal Cloud Foundry (PCF)

Infrastructure as Code: Terraform, AWS CloudFormation, ARM Templates

Monitoring & Observability: CloudWatch, Azure Monitor, Prometheus, Grafana, ELK Stack

Databases: PostgreSQL, MongoDB, Oracle, SQL Server

Practices: Agile (Scrum/Kanban), Incident Response & RCA, Low-Latency & High-Availability System Design, Nexus/Nexus IQ, Pendo Analytics, Storybook

WORK EXPERIENCE

Full Stack Developer

Cloudsky Solutions

January 2024 – Present

St. Louis, MO

- Designed and automated highly available AWS infrastructure using Terraform, Docker, Kubernetes (EKS), and Jenkins, reducing deployment time by 60% while maintaining 99.9% system availability.
- Built CI/CD pipelines with Jenkins and GitHub Actions, enabling zero-downtime deployments and reducing release failures by 40%.
- Implemented monitoring and observability using AWS CloudWatch, Prometheus, and Grafana, reducing Mean Time to Resolution (MTTR) by 35% through proactive alerting.
- Optimized backend services and database queries (PostgreSQL, Redis caching) to reduce average API latency by ~25%, and automated cloud operations with Python/Bash, improving infrastructure provisioning efficiency by 50%.

- Adopted AI-assisted development practices — GitHub Copilot and LLM APIs (OpenAI, Claude, Azure OpenAI) — to accelerate code reviews, automated test-case generation, and internal documentation, cutting routine development time by ~20%.

Full Stack Developer

October 2020 – October 2022

Capgemini (Client: Discover Financial Services)

Hyderabad, India

- Developed and maintained Java backend REST APIs (Core Java, POJOs, design patterns) for “Action,” a fraud-investigation application used by call center agents to resolve customer fraud cases in real time, maintaining sub-200ms average response times across a 20+ microservice architecture on the Orion team supporting Discover Financial Services.
- Contributed to migrating legacy core Java systems to a modern microservices architecture, applying design patterns and efficient data structures to improve maintainability and query performance across services backed by relational and NoSQL data stores.
- Wrote unit tests with JUnit, achieving ~85% coverage on core services, to validate API logic and business rules, and coordinated with the QA team on integration, smoke, and regression testing prior to production releases.
- Built and maintained CI/CD pipelines using Jenkins, Git, Docker, and Kubernetes, deploying services to Pivotal Cloud Foundry (PCF) and supporting applications processing 500,000+ API requests daily while reducing deployment effort by 50%.
- Developed Infrastructure as Code using Terraform and CloudFormation and automated cloud operations on AWS, improving application availability to 99.9% and reducing environment provisioning time by 70%.
- Performed incident response, root cause analysis, and production troubleshooting using CloudWatch, Linux, and centralized logging, decreasing production incidents by 30%.
- Elaborated system requirements into user stories and acceptance criteria during sprint ceremonies and backlog refinement; mentored junior developers via pair programming and code reviews, reducing PR rework by 20% and improving team velocity by 20%.

EDUCATION

Master of Science in Computer Science — University of Central Missouri

Lee's Summit, MO

CERTIFICATIONS

JEE Certified Full Stack Java Developer · Oracle Cloud Infrastructure Generative AI Certified Professional · AWS Certified Developer – Associate
